Luke's ranger setup

Shortcuts

I've added many folder-specific shortcuts; refer to rc.conf for the specifics, but here's the idea. There are for "verbs:"

- g -- "go or cd"
- t -- "new tab"
- m -- "move file"
- Y -- "yank or copy file"

These "verbs" take "nouns" or "arguments," like these:

- d -- "~/Documents"
- D -- "~/Downloads"
- cf -- "~/.config"
- And many others, including those you add!

Press any "verb" followed by any "argument" to perform a folder operation. "gd" will cd to ~/Documents, for example. "mD" will move the selected file(s) to ~/Downloads. "tcf" will create a new tab in ~/.config, etc. etc.

Many little things!

- bg -- (for i3 users) makes an image your background (assuming i3 is looking at ~/.config/wall.png for your background)
- X -- Extract a zip/rar/tar.gz, whatever. Runs a script that picks the right command for the right archive.
- Z -- zips a folder up into a .tar.gz archive.
- C -- rotates an image (requires imagemagick)
- F -- flips an image (requires imagemagick)
- moc shortcuts

    - MS -- Start server
    - MK -- kill server
    - MN -- Start playing selected song/folder now
    - Ma -- Enqueue selected song/folder
    - Mp -- Pause
    - Mn -- Next track
    - Mb -- Previous track

- MP -- Convert .md file to .pdf (requires Pandoc)
- ytv -- Download YouTube video (paste in url) (requires youtube-dl)
- yta -- Download audio of YouTube video (paste in url) (requires youtube-dl)
